

JBoss Enterprise Middleware Training and Certification

JBoss Courses

JBoss Enterprise Application Development (JB225)
 Intended for mid-level Java developers, this hands-on course introduces you to Java EE frameworks, specifications, and application programming interfaces (APIs). Create, test, and maintain Java EE-compliant applications from start to finish using the Eclipse-based JBoss® Developer Studio.

JBoss Seam Development (JB311)
 This course teaches experienced Java developers how to use Seam to tie components together and manage complex IT systems. It focuses on the core elements of JBoss Seam: rapid application development, an industry standard UI, Java Persistence API (JPA) integration, end-to-end security, and integrated tooling in JBoss Developer Studio.

JBoss Application Administration I (JB248)

Learn the essential tasks for installing, configuring, and managing JBoss Enterprise Application Platform 6. This course also helps prepare you for the JBoss Certified Application Administrator (JBCAA) exam.

redhat.com/training/courses/jb248/

JBoss Application Administration II (JB348) - available Fall 2012

This course is for experienced system administrators responsible for deploying and administering JBoss Enterprise Application Platform in large-scale production environments. It covers clustering, performance tuning, and securing Enterprise Application Platform instances, as well as troubleshooting and applying fixes.

JBoss SOA: ESB Service Implementation (JB431)

In this course, experienced Java EE developers will learn the process for developing and deploying ESB services and providers.

redhat.com/training/courses/jb431/

JBoss Enterprise BRMS Implementation (JB433)

Concentrating on business rules development, this course teaches developers how to author, test, debug, and control business rules in a production environment. In addition, they will generate rules packages and learn how the BRMS runtime environment executes rules.
